

#117

TENNESSINE

Ts

117

[294]

NAME ORIGIN

Discovered by a Russia-US collaboration. It's named after Tennessee where some work to prepare it was done.

DISCOVERY

Tennesine's creation was announced in 2010; it's the most recently discovered element as of 2019.

SHORT-LIVED

The most stable isotope of tennesine has a half-life of just 51 milliseconds, so we know little of its properties.
